

Task 2: To-Do List Application

Name: Gaurav Singh

Description:

I developed an interactive To-Do List application using JavaScript and DOM manipulation. This application allows users to add tasks, mark them as completed, and delete them dynamically. The project demonstrates the use of event handling and dynamic UI updates.

Technologies Used:

- HTML
- CSS
- JavaScript (DOM Manipulation)

Features:

- Add new tasks dynamically
- Mark tasks as completed
- Delete tasks
- Interactive and responsive UI
- Real-time updates without page reload

Live Website:

https://gaurav7820.github.io/Alfido_Tech_Internship/Task-2-Todo-App/

GitHub Repository:

https://github.com/GAURAV7820/Alfido_Tech_Internship/tree/main/Task-2-Todo-App

Steps to Run:

1. Clone or download the repository
2. Navigate to Task-2-Todo-App folder
3. Open index.html in any browser

Code Snippets:

```
<div class="input-section">
  <input type="text" id="taskInput" placeholder="Add a new task...">
  <button onclick="addTask()">Add</button>
</div>
```

```
.input-section {
  display: flex;
}

input {
  flex: 1;
  padding: 10px;
  border: 1px solid #ccc;
  border-radius: 5px 0 0 5px;
}
```

```
let input = document.getElementById("taskInput");
let task = input.value.trim();

if (task === "") return;
```

Commands Used:

```
git init
git add .
git commit -m "Added Todo App"
git push
```
